

Name:Rameen Faisal

RollNo:FA24-BCS-094

Section:A

Assignment 1 — Your Personal CV Page

Difficulty: Foundational · **Covers:** Lectures 3–6 (HTML & HTML5, Semantic HTML and Forms, CSS Fundamentals, the CSS Box Model) · **Folder:** assignment-1/

Task: Build a single-page personal CV/résumé as a static HTML + CSS website — no JavaScript, no framework, just semantic HTML5 and hand-written CSS. This is where you prove you actually know the raw building blocks before anything is allowed to hide them from you.

Your page must include, at minimum:

- A header with your name, a short professional tagline, and a photo (a placeholder image is fine).
- An “About Me” section.
- An “Education” section listing your academic history in a semantic list or table.
- A “Skills” section.
- A “Contact” section with a real `<a href="mailto:...">` link and at least one social/portfolio link.
- Correct use of semantic HTML5 elements throughout — `<header>`, `<nav>`, `<main>`, `<section>`, `<article>`, `<footer>` as appropriate, not a page built entirely out of unstyled `<div>`s.
- Styling entirely in a separate `styles.css` file (external stylesheet, not `inline style=""` attributes) using the box model correctly — sensible margins, padding, and borders, not everything jammed against everything else.

HTML Code:

```
<!doctype html>
```

```
<html lang="en">
```

```
<head>
```

```
<meta charset="UTF-8" />
```

```
<meta name="viewport" content="width=device-width, initial-scale=1.0" />
```

```
<title>Rameen Faisal — CV</title>
```

```
<link rel="stylesheet" href="style.css" />
```

```
</head>
```

```
<body>
```

```
<header>
```

```

```

```
<h1>Rameen Faisal</h1>
```

```
<p class="tagline">
```

```

<ul>
```

```
<li>
```

```
    Built a logic-based recruitment advisor in Python that screens
    and evaluates candidates by matching CV data against both
    custom-built and pre-existing job templates.
```

```
</li>
```

Designed a system to automatically fetch and parse key details from candidate CVs, applying rule-based matching logic to score and rank applicants, reducing manual screening effort.

</article>

<article>

<details>

<summary>Criminal Identification System</summary>

<p>Java · OpenCV · JavaFX</p>

Developed a real-time face detection system using OpenCV to identify individuals and retrieve their criminal records from a database.

Designed an intuitive JavaFX GUI to display suspect profiles and match results with previous records.

</details>

</article>

<article>

<details>

<summary>Optimart — E-Commerce Application</summary>

<p>Java · JavaFX · JSON</p>

Built a fully functional e-commerce desktop application with a JavaFX GUI supporting product browsing, cart management, order placement, and automated bill generation.

Implemented JSON file-based storage to persist product, user, and order history data across sessions.

</details>

</article>

<article>

<details>

<summary>Digital Cookbook</summary>

<p>C++</p>

Developed a desktop application in C++ for storing, adding, and searching recipes with a clean and user-friendly interface.

</details>

</article>

<article>

<details>

<summary>Book Inventory System</summary>

<p>Database Design · SQL</p>

Designed and implemented a relational database system to manage a library's book inventory, including cataloguing, stock tracking, and query operations.

Applied core database concepts including entity-relationship modelling, normalization, and structured SQL queries for efficient data retrieval.
